

Success Story

Illuminating the darkness - [ECKS MARINE](#) brings the unique worksite lights of [TSR GROUP](#) to German market

It might be the darkness of Finland's winters that challenged the team of TSR GROUP to develop work lamps that can illuminate even the most challenging worksites. Their efforts resulted in a convincing, innovative product: With its' modern LED technology and a design that does not waste a single ray of light, WorkLite™ obtains an incredible light output. The product convinces also with other Scandinavian values: It is ecologic, thanks to excellent energy efficiency and a fully recycable light's body. And it is a practical and robust product, easy to install and built to last, even in harsh conditions.

The Finnish Enterprise Europe Network team at [Turku Science Park Ltd](#) supported TSR GROUP to bring their innovation to market and find international sales partners. In cooperation with German Enterprise Europe Network team at [TUTECH INNOVATION](#) a contact could be established to the Hamburg based company ECKS MARINE, which

represents several innovative products of international suppliers, focussed on the German maritime sector. ECKS MARINE'S owner Torsten Ecks was at once impressed by the quality and advantages of the Finnish worksite lamps and their excellent suitability not only for construction sites but also for lighting on board of vessels: *"It is a pleasure to*

introduce unique high quality products like WorkLite™ to the German market. The Enterprise Europe Network is a great platform to get in touch with promising innovative companies like TSR GROUP!" Combining the excellent Finnish product with the sector knowledge and client network in German market, both companies see a great potential for future growth based on their cooperation.

The Enterprise Europe Network is an initiative of the European Commission that helps ambitious SMEs innovate and grow internationally. The services TUTECH offers within Enterprise Europe Network are free of charge, thanks to the funding by European Union and by the City of Hamburg.
