Freyzein Urban Outdoor GmbH

Jan Karlsson

The startup FreyZein from Austria wants to end the textile industry's dependence on petroleum-based synthetics making clothing and textiles circular. FreyZein is part of a transnational research consortium on innovative materials that have the potential to substitute synthetic materials in the „technical textile market“.

OXARA

Gnanli Landrou

Oxara, a spin-off from ETH Zürich, turns construction waste into sustainable building products based on their unique and innovative admixture technology. As an example, oxacrete admixture serves to produce cleancrete: a cement-free concrete, a material 20% cheaper and 90% more eco-friendly than conventional concrete.

© REWOW srl

REWOW

Antonino Biundo

REWOW is an Italian innovative startup that changes the fate of used cooking oils and fatty acid-rich mixtures that cannot be used for consumption. We use an innovative biotech process to transform these compounds in novel bioplastics for different markets.

Green Gen Technologies

Aline Rogeon

The French startup Green Gen Technologies revolutionizes de-luxe packaging with a Zero-Glass solution: The Green Gen Bottle® made with biobased, renewable and biodegradable materials such as flax and bio-resins possesses a unique, premium aesthetic and is designed for wines, spirits and cosmetics.

SUPASO GmbH

Mario Maier

SUPASO from Austria produces sustainable insulating packaging from recycled waste paper for the refrigerated shipping of temperature-sensitive food and other goods. Our SUPASO ecoliner is an innovative, biobased, high-performance and at the same time inexpensive insulating packaging that can be individually tailored to the box size, content and delivery time and offers better cooling performance than conventional, non-sustainable solutions made of EPS (Styrofoam).

FELTWOOD

Luzia Botella

Feltwood Materials – ecological, recyclable, resistant, versatile
The Spanish startup Feltwood creates industrial materials using vegetal waste from agriculture or industry side streams to replace plastic in many applications. Materials are biodegradable, recyclable and compostable. Feltwood technology provides a true circular economy solution with a focus on reusing and recycling materials.
